

## Project Timeline

**Start Date:** [MM/DD/YYYY]

**End Date:** [MM/DD/YYYY]

**Duration:** [e.g., 3 weeks]

---

## Project Overview

### What is this project about?

Brief summary of the sci-fi-inspired web design portfolio project. What inspired it? What goals does it serve (personal branding, job-seeking, skill showcase)?

---

## Role & Responsibilities

- UI/UX Design
  - Front-End Development
  - Visual Concept
  - Figma Prototyping
  - Case Study Documentation
- 

## Project Goals

1. Create a captivating sci-fi inspired web portfolio
  2. Reflect emotional storytelling and usability
  3. Make a real-time GitHub connected project to show live progress
  4. Build a "Design Process" section for transparency
  5. Demonstrate end-to-end skills (concept, sketch, design, code, ship)
- 

## User Persona

**Target Audience:** Recruiters, design agencies, potential clients

**Pain Points Addressed:** - Lack of immersive portfolios - Difficulty understanding creative processes - Desire to see personality + skill in action

---

## Problem Statement

Design portfolios often lack emotional impact or clear thinking. The goal was to design an engaging, futuristic experience that is both functional and visually unique while expressing the designer's identity and skills.

---

## **Ideation & Sketching**

- Brainstorm themes (Starfield, No Man's Sky, Star Trek)
- A4 sketches and layout experiments
- Notes on how aesthetics affect emotion

Insert images of your raw sketches here (once in Notion).

---

## **Wireframes (Low-Fidelity)**

Insert wireframes with explanations: - Layout decisions - Navigation logic - Content hierarchy

---

## **Visual Design (Figma/High-Fidelity)**

- Font choices and why
  - Color palette selection and rationale
  - Sci-fi design components (shapes, glow, UI)
  - Screenshot/Embed of Figma
- 

## **Development**

- Stack: HTML, CSS, JS (or mention if used Tailwind, React later)
  - GitHub link for real-time version
  - Key challenges & how you solved them
  - Mobile responsiveness check
- 

## **What I Learned**

- Time management
  - Translating emotion into visual design
  - Working with GitHub and documenting progress
  - Confidence with personal branding
- 

## **Outcome & Reflections**

- What works well in the final version?
  - What would you improve in a V2?
  - Screenshots or link to final site
  - Share emotional & creative impact
- 

## **Metrics (if applicable)**

- Number of GitHub commits

- Time spent designing vs coding
  - Recruiter views (if tracked later)
- 

### **SEO Keywords (Optional)**

- sci-fi web portfolio
  - UX case study beginner
  - HTML CSS beginner project
  - futuristic personal website
- 

### **Resources**

- GitHub Repository: [Link]
  - Figma File: [Link]
  - Hosting: GitHub Pages or Hostinger
- 

### **Final Note**

*"Give me an idea and let me scratch it — something beautiful will come out."*

Motto: "Designing the future, pixel by pixel."

---

Use this template inside **Notion** as a project log or case study doc. Let me know if you want me to export it as a Notion markdown to import directly.
